ABSTRACT

The study examines how employee education programs can improve the efficiency of an organization in Islamic banks in Quetta, Pakistan. With the increase in the prominence of Islamic banking, it has been even more crucial that the competencies of employees are aligned to Shariah-compliant practices, and to the current standards of financial practices. Further, in this study we have used reliability, descriptive, correlation and regression analysis and stratified sampling is used with sample size of 200 which was determined through G*Power software. The paper provides an observation of how institutional performance is boosted by structured employee training programs in aspects of Islamic financing, customer service, ethical banking, and digital technology all of which advance workforce capability and service delivery. Based on the responses of affected employees and the observations of the institution, the study concludes that education programs play an important role in motivating staff, ethical behavior and a sense of being aligned with the goals of the institution. Although these are advantages of the Islamic banks in Quetta, the industry faces challenges like shortage to the availability of qualified trainers, inadequate infrastructure, and receptiveness to modification. Finally, the results confirm that due to the creation of specific educational programs can provide sustainable development and efficiency of Islamic banking organizations.

Introduction

Background Information

In this new age of the knowledge-based economy, all organizations, especially those in the financial sector know that it is vital to have the programs that promote human capital development, improvement in service performance and achievement of group objectives. Employee education programs have also been classed as the best way to enhance skills, knowledge, and abilities of the employees within these strategies (Al Ali et al., 2018). The banks in Pakistan including the one in Quetta have started focusing more on such initiatives to enable them to be competitive and keep up with Islamic precepts. Islamic banks are

characterized by a different structure in their operations, which is based on the shariah principles, operational effectiveness, ethical banking and customer satisfaction. With growth in demand of Shariah compliant banking services, there is also need to have competent employees that are able to comprehend the aspects of Islamic financial system, risk-sharing, and ethical governance. Skill gaps, productivity, and service delivery in such institutions can be addressed with the help of employee educational programs (Khan & Abdullah, 2019).

Employee education programs refer to the initiatives aimed at enhancing the knowledge, skills, and competencies of the employees. Such programs in Islamic banks can be workshops on the principles of Islamic finance, customer service training, leadership development, or digital banking tools. These can be carried out in the form of seminars, distance ed, or even course-based certification, often bank sponsored, and sometimes linked with educational establishments (Noe, 2017). These programs raise the employee motivation, loyalty, and engagement. When the banks invest in their development, employees feel appreciated and committed. The engagement is translated into a better performance and quality of services, which are necessary in a competitive and ethical sector such as Islamic banking (Werner & DeSimone, 2012).

The Islamic banks are more concerned about ethical financial services provision that is also Shariah compliant and ensuring efficiency of operation. As opposed to conventional banks, they save on interest-based transactions and work on the models of profit and loss sharing. So the Islamic bank productivity is associated with the rules adherence, service delivery, risk reduction and trust of the customer (Boyne, G. A., 2002). The criteria that are used to determine efficiency in such institutions include the minimization of the processing period, the interaction with the client, and the modification of internal controls. Nevertheless, the performance of the players is still impacted by the lack of training on the Islamic finance, presence of obsolete systems and low levels of digital literacy. These gaps can be bridged through education programs which can also equip the workforce in line with the contemporary needs of the bank as well as Islamic principles (Bel, G., & Fageda, X., 2010).

In as much as Islamic banks have such benefits, there are numerous challenges during the implementation of education programs. These are low budgets, shortage of skilled trainers in Islamic finance, and the factor that hinders change. These obstacles are even more acute in cities with poor access to professional growth such as Quetta (Wang, X., & Wang, Z., 2020). Quality assurance of training programs is also required so that they are in tandem with the global best practices and those of Islam banking.

The provincial capital of Balochistan is Quetta, and there has also been an increasing number of Islamic banking institutions there. These institutions however have issues like lack of trained professionals, insufficient infrastructure to continually learn and also low digital preparedness. Employees have no access to the specific training opportunities in green finance and values, customer service, and technologies in banking. To such inadequacies is subjected service quality and institutional repute. These limitations may be overridden by a set of educational programs that have to be performed in a structured manner and involve an emphasis on the Shariah compliance, digital tools, customer relations, and financial ethics (Farooqui et al., 2021).

Islamic banking has now become a dynamic yet growing sector in the financial system of Pakistan in the last few years. The cities such as Quetta, which are struggling in terms of development, are also experiencing a constant increase in the number of Islamic banking branches with expanding popularity of the financial services that are Shariah-compliant. With this kind of growth we find that there is an increased need of having quite well thought and appropriate employee training. This is one of the most important fields of development which the implementation of Shariah-compliant training program is designed to educate the personnel on the principles of Islamic financial system, ethical procedures and operative principles. These training programs are essential in enhancing organizational effectiveness by helping employees to familiarize themselves with the basic aspects of Islamic banking, reduce errors, and be ethical in their behavior and end up increasing the confidence of customers in these institutions. In contrast to traditional banks, the Islamic financial institutions work within the rigid system of Shariah law according to which: I. Shariah law bans interest (Riba), encourages them to share risks and focus on ethical investment and social justice (Abbas et al., 2019)(K. Hussain, Ahmed, Hussain, & Hassan, 2023).

This correspondence between the values of the employees and organizational mission, in turn, leads to a more integrative and effective working environment. Nonetheless, such programs are not implemented without troubles. Scarce finances, lack of available local trainers who have knowledge in the Shariah and lack of willingness to change among older working staff can compromise the performance of educational programs. Islamic banks can address these obstacles by partnering with the country organizations such as Islamic Banking Department of the State Bank of Pakistan, the National Institute of Banking and Finance (NIBAF) and the academic institutions that deal with Islamic finance. Such collaborations are capable of availing professional expertise, aligned curriculum and capacity building to banks in Quetta. Additionally, it will be possible to use digital platforms to provide training modules at an affordable cost, thus addressing the geographical challenge of the area (M. Hussain, Shah, Durrani, & Hassan, 2023).

Problem Statement

Lack of structure education programs of the employees is leading to lack of high levels of organizational efficiency in Islamic banks in Quetta. The banks also lack special training in the field of Islamic banking, online banking, and customer care. This is also essential because as per state bank of Pakistan has vision to convert all conventional banks into Islamic banks as being Islamic country and due to that lack of educational programs can create problems to satisfy the needs of customers, therefore, this study examines ways through the educational programs can be used to fill in gaps in skills and enhance the efficiency of Islamic banking in Quetta.

Scope of the Study

This research is more concerned with Islamic banking institutions in Quetta and the extent to which training and education programs implemented on employees plays in the efficiency of an organization. It comprises administrators and non-administration workers within different departments like operations, finance, customer service and Shariah. The study evaluates amount, access, and quality of training programs and its influence on performance and efficiency of the job and the institution.

Research Questions

- What is the impact of education programs on organizational efficiency of Islamic banks in Quetta?

Research Objectives

- To determine the impact of education programs on organizational efficiency of Islamic banks in Quetta.

Significance of the Study

This research paper is beneficial in that it gives us information on how effective employee education programs can be in boosting the efficiency of Islamic banks. It raises the issues that there should be consistent development so as to achieve compliance with Shariah, customer satisfaction as well as to be competitive in service delivery. The conclusion will be of benefit to the HR departments, policy-makers and academic institutions to help them develop good training structures towards Islamic banking.

Review of Literature

Islamic Banking

In present-day financial world, Islamic Banks are crucial in facilitating the ethical operation of financial institutions with regard to the Sharia law. Quality and productivity of human capital is a crucial factor in the success of operations of these institutions. This has led to the development of employee education programs that are used as a crucial means of increasing the efficiency of an organization. Learning programs facilitate the division between further abstract Islamic finance and reality of the banking practice, ensuring that the staff is trained thoroughly to be more than competent in complex working processes being ethically conscious and following the rules of Islamic finance. With the further spread of Islamic banking worldwide and in the Pakistani context, in particular, the daily practice of Islamic banking and the research community alike is gradually opening up to the issue of explaining the role that well-organized educational programs play in the overall performance of any given institution (Farooqui et al., 2021; Abbas et al., 2019; Salleh et al., 2019).

Training of employees has been known to be a strategic reinforcement of performance in both the modern and Islamic financial institutions. Noe (2017) underlined that properly structured training helps to develop technical, analytical, and interpersonal skills that can be used to achieve growth in measured outputs and efficiency. This is more so in the Islamic banking where the staffs have to deal with complicated contracts like Murabaha, Ijarah and Mudarabah.

The findings of a study by Abbas et al. (2019) showed that knowledge sharing training programs generated significant impact on innovation and Islamic banks performance in the Pakistani context. The employees who have attained frequent professional development also declared to have a resolute understanding of Shariah compliance and could embrace risk-sharing practice in a better way. As well, a comparative study conducted by Darus et al. (2017) in Malaysia revealed that the Islamic banks that had structured training programmes were performing better than the conventional banks in ethical service delivery and customer retention.

Islamic Work Ethics (IWE) is also an additional tool in making training programs more effective. Sincerity, responsibility, cooperation, and social justice focus on IWE, which also fits the agenda of Islamic finance (Siddiqui et al., 2022). The value-based programs have a better result on behavior at work. According to a study done by Farooqui et al. (2021), employees and

staff who took part in learning that encompassed talks about IWE showed an increase in job happiness, a decrease in turnover plans, and enhanced group work. The study by Nasrullah and Khan (2023) also showed that it can be useful in terms of incorporating Islamic ethical education in leadership and management courses, which was regarded to enhance loyalty among organizations.

Educational Programs

Educational programs in Islamic banking have expanded over the past two decades, as the industry itself has grown rapidly. These programs aim to provide students and professionals with knowledge of Shari'ah principles, modern finance, and the skills needed to work in Islamic financial institutions. According to Dusuki (2008), education in Islamic banking is essential for ensuring that financial practices remain compliant with Islamic law while meeting global banking standards.

Universities and specialized institutes play a central role in this field. For example, INCEIF in Malaysia, also known as the Global University of Islamic Finance, offers Master's and PhD programs to prepare graduates for leadership positions in Islamic finance (INCEIF, 2022). Similarly, the Centre for Excellence in Islamic Finance (CEIF) at the Institute of Business Administration in Pakistan runs graduate programs, training workshops, and industry projects to bridge the gap between theory and practice (Khan & Bhatti, 2018). These institutions show how academic programs are designed to blend Shari'ah knowledge with practical financial training.

Professional bodies also provide certification programs that strengthen the industry. The Accounting and Auditing Organization for Islamic Financial Institutions (AAOIFI) has developed qualifications such as the Certified Islamic Professional Accountant (CIPA), which align educational content with international standards (AAOIFI, 2021). Such certifications help professionals gain credibility and ensure consistency in practices across different countries.

Despite these advances, studies highlight some challenges. According to Hassan and Aliyu (2018), many graduates entering Islamic banks lack practical skills, particularly in areas like product development, Shari'ah governance, and digital banking. This suggests that while the theoretical base is strong, more emphasis is needed on experiential learning, case studies, and internships. Another challenge is the diversity of Shari'ah interpretations across regions, which makes it difficult to design programs that are universally applicable (Iqbal & Mirakhor, 2011).

Recent trends show efforts to modernize Islamic banking education. Programs are increasingly incorporating topics such as fintech, sustainable finance, and the role of Islamic finance in achieving the UN Sustainable Development Goals (SDGs) (World Bank & Islamic Development Bank, 2020). This shift reflects the growing demand for professionals who can apply Islamic finance principles to contemporary challenges.

Educational programs also face challenges. Some studies note a mismatch between what programs teach and what the job market requires. For instance, Jackson (2016) argues that many graduates lack employability skills such as teamwork, communication, and adaptability, which employers demand. This highlights the importance of updating curricula regularly to meet both academic standards and market expectations.

General understanding and knowledge-sharing in an organization is central to sustained enhancement and creative thinking. The greater adaptability of Islamic banks which harbor culture of learning and mentoring is enjoyed because of the collective learning capacity therefore adapting to changing environmental conditions in the field of finance. The reason is that Abbas et al. (2019) gave some empirical support to the idea that the mediating role of organizational learning exists between knowledge-sharing behavior and innovation. Other investigations conducted by Yusof et al. (2020) proved that the implementation of knowledge management systems in Islamic banks contributed to the improved efficiency of the services and high compliance levels.

There are opportunities and challenges of the digitalization of the financial sector that Islamic banks face. According to Hermawan et al. (2022), talent development drastically enhances the institutional digital preparedness and responsiveness. Majority of Islamic banks in developing cities like Quetta have to be equipped with training regimes that incorporate digital banking, cybersecurity, and financial technology (fintech). It would not only enhance operational efficiency but it would also help banks to reach younger and tech-savvy customers.

Other conclusions of the study of Abubakar et al. (2022) emphasized that the introduction of artificial intelligence (AI) training into the Nigerian Islamic banks positively impacted the productivity and increased risk assessment abilities. Such experiences can be transferred to Pakistani banks by narrow focus upskilling of technology.

It is general to most Islamic banks that their operations were more costly than those of the traditional banks because the contracts following the requirements of Shariah are complex (El-Gamal, 2006). These costs are dampened by the use of

specialized training to achieve efficiency in the procedures. According to Siddiqui et al. (2022), with the personnel educated on the Islamic jurisprudence of finance, it was easier to cope with the documentation and educating clients, making the whole process shorter and error-free.

This was supported by Kassim and Majid (2018) who were able to demonstrate that the ratios of cost-efficiency improved in the institutions which had invested in a continuous training on compliance. These were particularly improved in customer service departments where the resolving time was decreased and clients gave better feed backs.

There are a number of institutions that train in Islamic banking where standardization of certifications is possible. The Accounting and Auditing Organization for Islamic Financial Institutions (AAOIFI) and the Institute of Bankers Pakistan (IBP) have elaborated detailed curriculum designed to help professionals become the owners of the industry-standard skill set (AAOIFI, 2022). Certification is used to bring consistency with regard to providing knowledge, as well as providing a demonstration of credibility of the institution.

In Pakistan, the National Institute of Banking and Finance (NIBAF) runs Islamic finance related training classes and diploma courses. Partnership between these institutions and Islamic banks has been shown to enhance employees retention, compliance and innovation. The latest Islamic Research and Training Institute (IRTI, 2021) reports have highlighted the increased importance of virtual training platforms as a way of providing scalable education offering throughout the region of OIC.

Organizational Efficiency in Islamic Banking

Constant refinement of the practice (CPD) has become a strategic imperative in the rapidly evolving market of Islamic Finance especially in the underdeveloped banking system of Quetta. CPD is continuous improvement of skills and learning through which employees can be knowledgeable, flexible, and not caught up in the present. The issue of CPD in the Islamic banks is not immune to keeping brought up to date financial skills but also to sustain the Shariah compliance in the face of changing jurisprudential interpretations and global financial trends. The distinctive operation pattern of the Islamic banking that also includes the use of such complicated contracts like Musharakah and diminishing Musharakah, Sukuk structuring, and Takaful requires a labour force that constantly expands its capacities. In a world where there are more and more demands on the products and services of Islamic banking as well as the pressure of customer demands and advances in technology, CPD guarantees that employees are able to rapidly respond to novel tools, modifications in law, and consumer requests.

Existing studies indicate that CPD programs integrated into Islamic banks have a beneficial effect on adaptive efficiency (i.e., the quality of responding to environmental fluctuations, behavior changes of customers or technology, etc., rapidly and most effectively) in the institution (Salleh et al., 2019). In regions such as Quetta, where exposure of the employees to the contemporary financial ecosystems is narrow, CPD programs act as a paramount leveler. As an example, one can cite banks which provide CPD workshops monthly or e-learning training (re-fresher courses) on Shariah compliances, customer interventions, and online interface: the customer satisfaction and time taken in turning around their services become much more efficient. It also enables the mid level and senior staff to act as mentors to junior personnel so that the learning process is an ongoing activity. Additionally, through CPD, the company is able to minimize the mental drag that the employees encounter as they attempt to find their way around both the traditional banking practices and the Islamic banking standards that are both part of hybrid banking environments such as in Pakistan. Organizations that make investment in CPD get to enjoy increased competence among employees directly linked with the efficiency of the process, decreased number of errors, and increase in customer confidence.

The Research Methodology

This study employed a quantitative research design to examine the cause-and-effect relationship between employee education programs and organizational efficiency in Islamic banks. The study focused on employees working in Islamic banks in Quetta, with a stratified random sampling technique used to ensure adequate representation from major departments, including operations, human resources, finance, and customer service. A total of 200 employees were selected as respondents, with the required sample size determined using G*Power software. Employee education programs were considered the independent variable, while organizational efficiency was treated as the dependent variable. Data were collected through a physical survey conducted at five major Islamic banks in Quetta, using an adapted questionnaire based on a Likert scale. The collected data were entered and analyzed using SPSS. Descriptive and frequency analyses were conducted to summarize the characteristics of the data, while correlation analysis was used to assess the relationships between the study variables. In addition, regression analysis was performed to examine the effect of employee education programs on organizational efficiency, with the ANOVA, Model Summary, and Coefficients tables used to assess the overall model and the significance of the relationship between the variables.

Data Analysis and Results

Reliability Statistics

Cronbach's Alpha	N of Items
.822	2

Interpretation

There is great internal consistency in items; the Cronbach Alpha is 0.873, which means that it is relatively high. With the value that is higher than 0.8, the data-collection scale can be viewed as highly reliable because items of this scale reliably measure the underlying constructs of education programs and organizational efficiency.

Regression Analysis

Model Summary

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	.746a	.556	.554	.47765

a. Predictors: (Constant), educational_program

Interpretation

The **R^2 value of 0.557** the educational programs variable can explain up to 55.7 percent of the variance in the efficiency of the organization. Adjusted R^2 (0.555) shows that the ability of the model to provide explanations is robust even after removing the possibility of potential bias because of the sampling size.

ANOVA[a]

Model		Sum of Squares	df	Mean Square	F	Sig.
1	Regression	56.552	1	56.552	247.867	.000[b]
	Residual	45.174	198	.228		
	Total	101.726	199			

a. Dependent Variable: Organizational_efficiency

b. Predictors: (Constant), educational_program

Interpretation

The ANOVA test shows that the regression model is significant and both are true at $p<0.05$ implying that educational programs are very important in influencing the efficiency of the organization. This justifies the model to be used further in interpretation.

Coefficients[a]

Model		Unstandardized Coefficients		Standardized Coefficients	t	Sig.
		B	Std. Error	Beta		
1	(Constant)	-.394	.271		-1.453	.148
	educational_program	1.075	.068	.746	15.744	.000

c. Dependent Variable: Organizational_efficiency

Interpretation

The unstandardized coefficient (B = 1.075) shows that an upgrade of one unit of educational programs will mean a one unit upgrade in organizational efficiency. There is strong impact as indicated in the unstandardized Beta (0.746), and this relationship is verified as statistically significant with the p-value (.000). which also indicates that Null hypothesis is rejected.

Correlation Analysis

Correlations			
		educational_program	Organizational_efficiency
educational_program	Pearson Correlation	1	.746**
	Sig. (2-tailed)		.000

	N	200	200
Organizational_efficiency	Pearson Correlation	.746**	1
	Sig. (2-tailed)	.000	
	N	200	200

**. Correlation is significant at the 0.01 level (2-tailed).

Interpretation

The relationship between educational programs and the efficiency of the organizations is related strongly with a correlation of +0.746, and p-value of.000 is significantly different. This affirms that the more the people are involved in educational programs or the quality of such programs the more the efficiency of the organization will be enhanced.

Conclusion

This research has arrived at the conclusion that in Islamic banks educational programs do play an instrumental role in promoting the efficiency of organizations in Quetta. The correlation presented in the statistical analysis was high and positive (0.746) and the explanatory power (0.557) signaled that more than half of the variance of the efficiency is explained by the presence and quality of training programs.

Educating employees does not only lead to acquisition of skills. It fosters engagement of employees, increases their motivation, makes it well-Shariah put and improves service delivery. All of the aforementioned benefits work to deliver Islamic banks to the competitive vantage point as the financial environment becomes influx.

Notably, this study also shows that although there are significant improvements in the appreciation of educational programs by Islamic banks, there is much to be done. Problems with the anchoring of the implementation persist with the limitations in budget allocation, poor access to qualified trainers, and insufficient use of digital education systems. All of this indicates that the process is dependent on effective planning and strong institutional support.

It also implies that the employees working in the Quetta based Islamic banks are enthusiastic to engage in development programs but such opportunities are lacking or not related to their positioning. Such poor fit deters the potential of these programs to raise the levels of employee satisfaction and bank performance. Besides these, the absence of cooperation between banks and established companies providing education on the formal aspect of Islamic finance also serves to dilute the pipeline of the trained professionals.

Employee education programs have to be carried out through continuous efforts such as aligning the content of the training to the aspects of Islamic finance, using digital platforms, and a culture of constant learning. Further, the incorporation of learning results into main performance indicators will have a concrete payoff on the educational investments made.

To ensure sustainable influence, Islamic banks have to adopt internal learning hubs, invest in development of local talent and tie training performance to a strategic performance measure. Such measures will not only develop a talent pool but will also cultivate an ethics and performance culture (K. Hussain et al., 2023; M. Hussain, Hassan, Khan, & Khan, 2026).

Future research can also carry out a similar study in cities and provinces other than this one to bring in wider understandings. Also, a longitudinal study might be used to observe the effects of training on employee retention in the long-term perspective and growth of any organization. Discussions on the relevance of the digital learning and hybrid training model based on Islamic banking may provide new areas of studies.

In conclusion, Islamic banking sector in Quetta is at an inflection point. By making smart investments in their human resources through education and training, banks will achieve more than mere efficiency; rather, development programs will help them achieve their ethical and financial goals. The insights gained from this research will serve as a good foundation for further interventions and institutional development initiatives that recognize humans as the backbone of any Islamic banking system.
